Subject: FW: CRT glass processing (Recycletronics in Iowa)

Jim,
Just wanted to keep you updated on the Recycletronics sites in Iowa & Nebraska.
Below is an email between me and the owner, Aaron Rochester. I spoke with him numerous times. It appears all the CRT processing is taking place in Iowa and they are just storing the crushed glass material in Nebraska. He said the crushed glass is a mixture of leaded and non-lead glass.
It sounds like he talked to Ed Buckner on Friday and Ed told him to do an analysis on the crushed glass.

We want to make sure he does an analysis of glass from CRT's alone prior to being mixed with any other glass.

NDEQ will likely be sending him a LOW for failure to do a hazardous waste determination on the crushed CRT glass that he brought into Nebraska.

Subject: CRT glass processing

Aaron,

In speaking with you yesterday, you informed me that CRT processing was taking place in Iowa and the crushed CRT glass was being brought to Nebraska and being stored on a cement pad and covered with a poly cover. You stated that the material would be stored over the winter and used in the future as a component in the production of landscaping block. You said that CRT crushing or processing was not taking place in Nebraska, simply the storage of the material for future use.

Could you please respond to this email with a full description of what is taking place? Be sure to include any pertinent information including the following:

- a.) Location of activities in Nebraska. Who owns the property? 2301 G Street South Sioux City, NE and is owned by DA Davis Co.
- b.) What background work did you complete prior to starting this process.....ie...contacts with city, county, etc....

Original Dennis, the one making the block, spoke to South Sioux City inspection services and showed them what we were doing and received approval as long as we were not making block on that sight but only storing. We called you after a disgruntled employee kept calling city hall and you complaining about what we were doing with allot of misinformation. Since yesterday that employee has been fired for conspiring to steal. He was turned in by 2 employees he spoke to about leaving our facility in Iowa open over the weekend.

- c.) What does the crushed glass consist of? % lead CRT's & non-lead. Include any testing you have done with a description of exactly what was being tested.

CRT's consist of allot of non-lead, steel and funnel glass that has baked on lead onto the glass. The funnel is the thinner glass at the back of the tube. The T-Clip tests will be updated in the next few weeks but the ones from a few years ago are attached. We basically put a high concentration of the funnel glass in concrete and asphalt to make sure there was no leaching and that it was a safe and usable product.

- d.) What is the plan for the material...ie..landscaping block only? If known, where will landscaping block production take place? Who will be producing the landscaping block?

Benson Brothers Co. will be making the block on his land just off 20 East on correctionville Rd. The plan is to make monster block and landscaping block starting in late spring of 2016.

- e.) What is the overall timeframe for the project? How long do you anticipate the material being onsite in Nebraska?

The lease is for one year and Benson Bros own their own dump truck and skid loader with scoop so they can safely and efficiently bring the material over one truck load at a time. By this time next year the site should be empty.

If there is any other pertinent information that you can think of, feel free to include it. Photos of the Nebraska sight might be helpful as well.

The material will be brought over until Nov 1st and then we will have a permanent large water proof Polly cover over the aggregate through the winter until it is transported and used in the spring.

Thanks Aaron.

SAMPLE IDENTIFICATION	LAB NUMBER	COLLECTION DATE AND TIME
Lead Sand/Asphalt	CVI1562-01	09/24/12 12:00

Samples were received into laboratory at a temperature of 4.10 °C.

NELAC states that samples which require thermal preservation shall be considered acceptable if the arrival temperature is within 2 degrees C of the required temperature or the method specified range. For samples with a temperature requirement of 4 degrees C, an arrival temperature from 0 degrees C to 6 degrees C meets specifications. Samples that are delivered to the laboratory on the same day that they are collected may not meet these criteria. In these cases, the samples are considered acceptable if there is evidence that the chilling process has begun, such as arrival on ice.

Please refer to the Temperature and Sample Receipt form that is included with this report for additional information regarding the condition of samples at the time of receipt by the laboratory.

The reported results were obtained in compliance with the 2003 NELAC standards unless otherwise noted.

Reproduction of this analytical report is permitted only in its entirety. This report shall not be reproduced except in full without the written approval of the laboratory.

TestAmerica Laboratories, Inc. certifies that the analytical results contained herein apply only to the specific sample analyzed.
